

Electrical Maintenance Engineer

Average hours 42 PW, initially days moving to rotating shifts – 4-on/4-off

Full time

Longbridge, Birmingham

Aquapak Polymers based in Rubery are looking for an experienced Electrical Maintenance engineer/fitter to join an innovative independent plastics manufacturer. Aquapak Polymers is a new technology business, based in a brand-new facility in South Birmingham.

As part of a growing maintenance team you will be working on bespoke machinery across the site. Involved in planned and preventative maintenance in addition to carrying out repairs to support production. Fault finding and diagnostics, reporting all issues onto a computerised system, including the management of spares.

To succeed in this role, you will be electrically qualified to City & Guilds or even HNC/HND level. Good knowledge of various machines in a fast-paced manufacturing environment is essential and experience of extrusion machines, knowledge of PLC programs and good fault-finding experience are also desirable.

You will be a good team player and understand the demands of a growing business and the flexibility required as we increase the volume of production over the short to medium term.

This is an excellent opportunity to join a growing business in a full-time role and be part of a great team!

Please send your CV with your salary requirements to hr@aquapakpolymers.com
